

## Introducing Relational Databases.

1) Which field of the Customers table is the primary key?

Cnum is the primary key in the Customers Table.

2) What is the 4th column of the Customers table?

Rating is the 4<sup>th</sup> column in the Customers Table.

3) What is another word for row? For column?

Another word for row is Tuple, Entity, Opportunity.

Another word for column is Attribute, Key, Method.

4) Why isn't it possible to see the first five rows of a table?

When you insert in a row address, row address is constant.

But when you update a row if the row length increases then the row address may change and therefore it is not possible to see the first five rows of a table.
